

GRAPH 2 – COUNT OF STUDENTS BY PERFORMANCE CATEGORY

The three performance categories were fairly evenly distributed around 2,220 students, 2,200 students, and 2,093 students, respectively. This almost even distribution of the values in all three classes indicates that the equal-frequency discretization of Exam_Score has resulted in a well-balanced and fair dataset for classification.

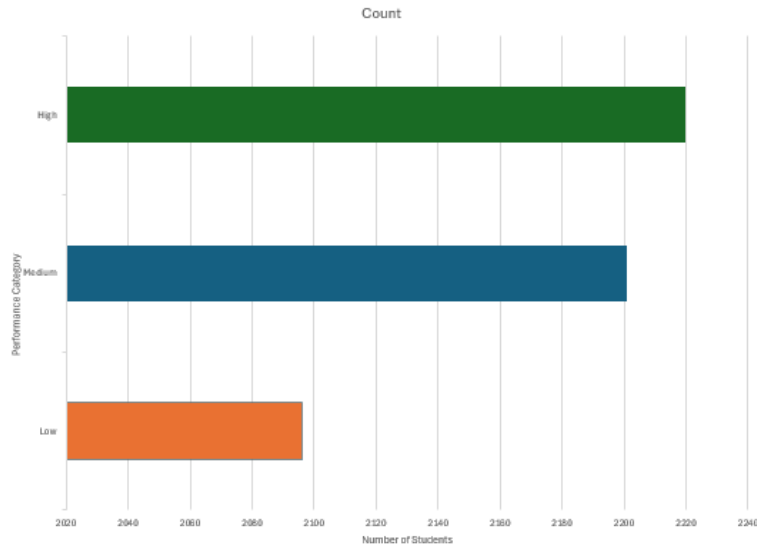

Figure 1 : The chart shows that High and Medium performers are nearly equal (~2,200 students each), while the Low performance category has slightly fewer students (~2,090).
