

GRAPH 5 – AVERAGE EXAM SCORE BY WEEKLY STUDY HOURS

There was a clear trend of higher exam grades for those who studied more hours per week in all ranges. A positive relationship between the hours studied and the academic performance was consistently observed, with the average score of the students who studied 0–10 hours per week being 63.97 and the average score of the students who studied 31–44 hours per week being 71.01.

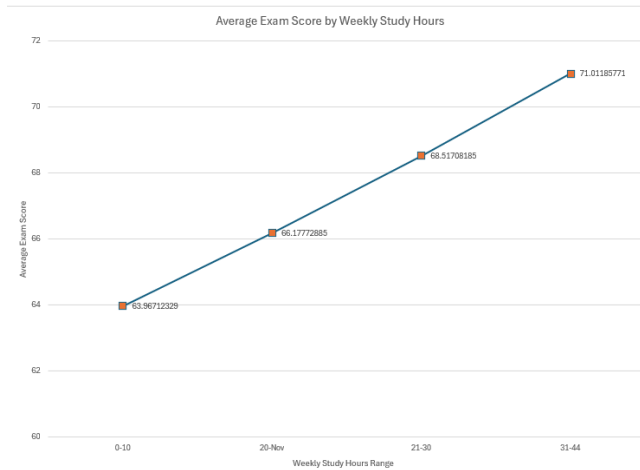

Figure 1 : A consistent positive trend is observed, with students studying 31–44 hours per week scoring the highest (~71.01), while those studying only 0–10 hours score the lowest (~63.97), confirming that more study time correlates with better exam performance.
